MBTI–FASHION VIBE NETWORK

Living Room Anchor & Compromise Bridge for Newlyweds

MADT7202 · Web & Social Network Analytics · Midterm Project

Kanyathat Rakdee | 6810424002

01 THE DECISION

As a Lead Design Strategist, the task is to shortlist a primary living-room style (the **Living Room Anchor**) and potential compromise styles (the **Bridge Styles**) for newlywed couples with different MBTI labels. The results may inform furniture-collection planning and the logic of a future recommendation engine.

02 WHY A NETWORK

A frequency ranking shows which styles appear often, but not how MBTI categories overlap in their observed Vibe connections. A **bipartite network** and **shortest-path analysis** help identify structural bridges for pairs with no shared direct Vibe. These paths describe the coded graph; they do not demonstrate psychological compatibility or actual customer preference.

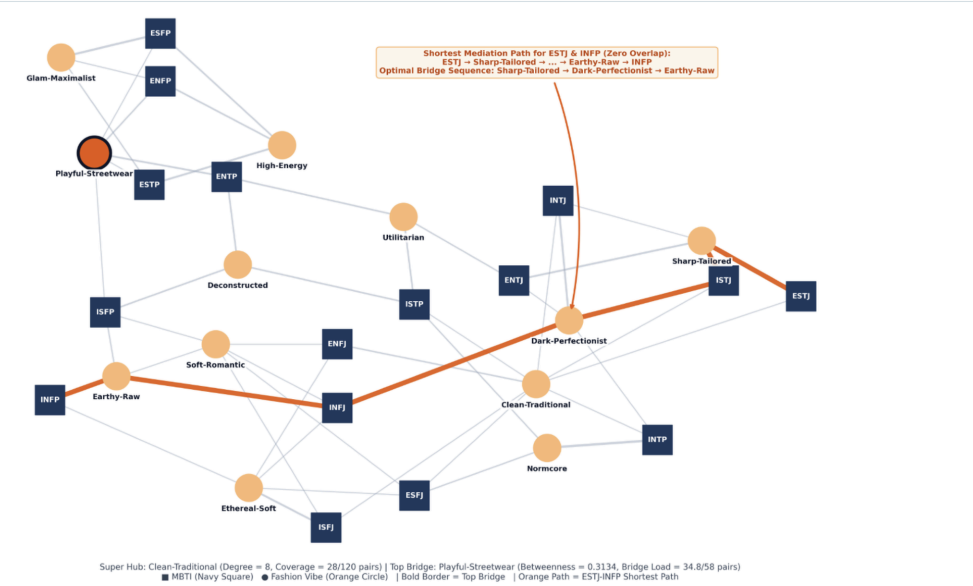

03 DATA

Sources	67 public TikTok lookbook images (268 coded observations) from six anonymized creator accounts (A–F).
Handling	Creator labels anonymized; usernames and identifying account details were not stored in the analysis dataset.
Period	**27 September 2026**
Coding control	Gemini assisted with Fashion Vibe coding. Fashion Vibe categories and room-style interpretations are researcher-defined.
Bias control	Coded attributes were compared against the framework of The Myers-Briggs Company ↗.

04 GRAPH CONSTRUCTION

Nodes / edges	Bipartite graph: 16 MBTI square nodes + 12 Fashion Vibe circle nodes.
Weighting	Image-level NPMI in [-1, 1], N = 67; shortest-path distance **d = 1/NPMI** for positive edges.
Pruning	Retain positive NPMI > 0; 51 of 51 observed edges retained.
Result	**28 nodes and 51 edges** out of 192 possible cross-set links.

05 THE GRAPH

Network visualization: the ESTJ–INFP pair has zero shared direct Vibe in the observed graph. The highlighted mediation sequence is Sharp-Tailored → Dark-Perfectionist → Earthy-Raw.

06 FINDINGS

HUB / ANCHOR CANDIDATE

Clean-Traditional · 23.3%

- Degree: **8**
- MBTI-pair coverage: **28/120**
- Weighted betweenness: **0.0456**

TOP STRUCTURAL BRIDGE

Playful-Streetwear · 48.3%

- Weighted betweenness: **0.3134**
- Bridge load: **34.8/58** no-overlap pairs
- Top bridge in **4 of 6** creator-removal runs

EXAMPLE MEDIATION

ESTJ × INFP

Zero direct overlap in the observed graph.

Highlighted Vibe sequence: Sharp-Tailored → Dark-Perfectionist → Earthy-Raw.

07 RECOMMENDED ACTION

- Use **Clean-Traditional** as an anchor candidate (e.g., Classic Contemporary / Hamptons-inspired room direction).
- Test **Soft-Romantic** or **Playful-Streetwear** as potential bridge candidates.
- Consider shortest-path logic using **d = 1/NPMI** in a future recommendation engine, subject to customer validation.

08 WHAT WOULD CHANGE MY MIND

- **Leave-One-Creator-Out:** Playful-Streetwear ranked as the top bridge in 4/6 runs; Soft-Romantic and Dark-Perfectionist led in the other runs. The result is sensitive to creator composition.
- **Proposed showroom A/B test (n = 100 couples):** future validation, not a completed experiment. If budget constraints dominate style alignment, compare price-tier furniture sets.

Exploratory findings from a small, creator-concentrated sample; co-occurrence and centrality are not causal evidence.
